

# Maintenance Management

**The problems of today - compliance, dependence on technology and knowledge, outsourcing, shortage of technical schooled workers - provide risks to your plant performance and therefore your asset value. To take control of these risks and to be able to improve your plant performance, maintenance management proves to be core issue now, and even more tomorrow.**

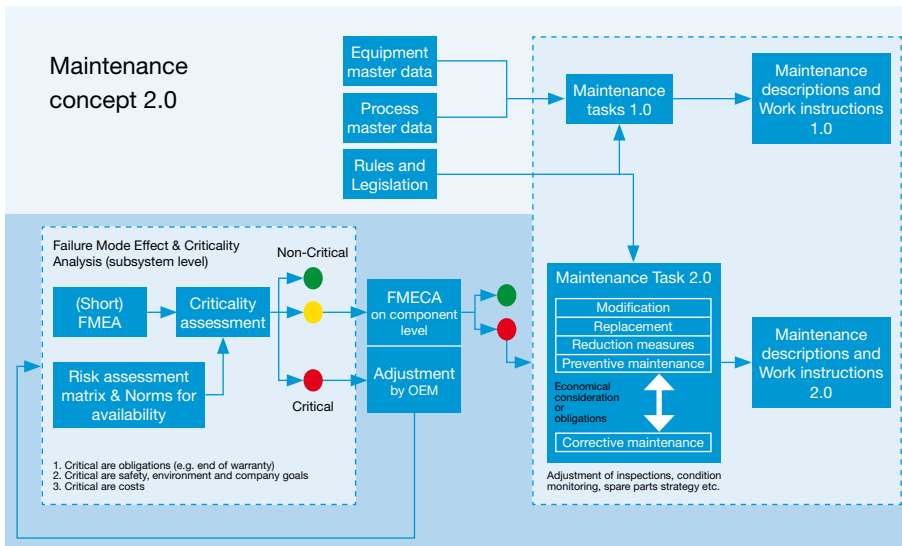

Verebus | TÜV-NORD can assist you in development of (risk based) maintenance strategies and practical implementation of maintenance management.

This not only enables you to control your capital intensive

- Compliance
- Dependence on technology and knowledge
- Outsourcing
- Shortage technical schooled workers

asset in the best way, but gives you the tools to improve your asset performance in a highly competitive market.
