

# Partner for Defence and Defence Industries

# Your partner for Defence and Defence Industries

As an independent engineering and consulting company, Verebus facilitates the link between humans, systems and equipment.

- Over 60 years' experience ensuring safe and guaranteed deployment of systems and infrastructure.
- Detailed in-house knowledge and experience.
- Engineering partner for Dutch Navy, Dutch Army, Dutch railways, contractors, shipyards, OEMs, System Integrators, maintenance and supply companies.
- Subsidiary of TÜV NORD Group, an international company with operations in 70 countries, with over 10.000 employees.

Verebus can act as a partner to help fulfill offset obligations. We can also act as a 'pied à terre' and sparring partner for overseas OEMs.

## Services

Verebus supports your Defence industry projects with a wide range of integrated services:

### Engineering

- Verebus offers a complete package of consultancy and services related to engineering.

### Technical documentation

- Technical documentation from programmes of requirements to user manuals.

### Integrated logistic support

- The right information about maintenance and spare parts when and where you need it.

### Training & education

- Verebus provides extensive training services to ensure systems are used and maintained safely and reliably.

### Consultancy

- Verebus also offers advice and consultancy in engineering and Asset Information Management.

### Asset Management

- Integrated Asset Information Management for Defence projects

## Hands-off, eyes-on for our clients

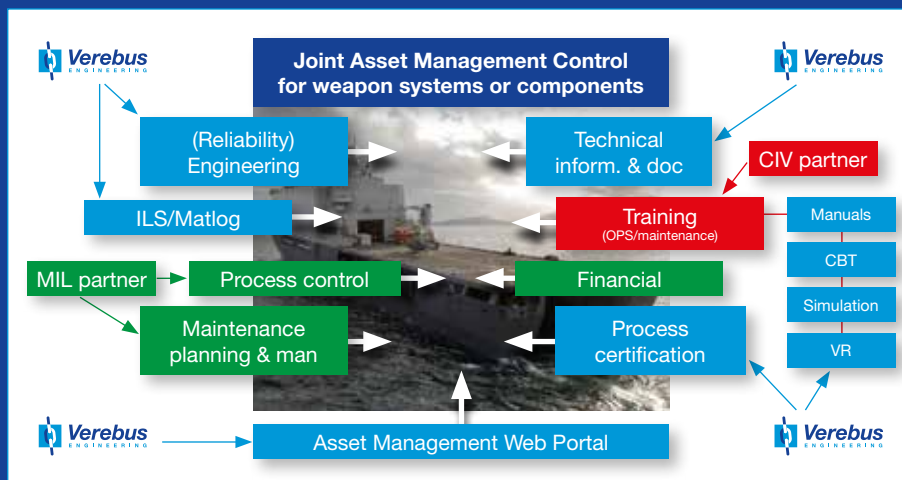

Verebus is an engineering and consulting company with its roots in electrical engineering, technical documentation and Asset Information Management for marine and offshore markets. We offer consultancy and solutions at all stages of the engineering life cycle, from design and construction to training and operation.

Because we speak our clients' language, Defence organizations like the army, navy and air force can outsource all their Asset Information Management to us. We call this a 'hands-off, eyes-on' approach. Verebus handles engineering, technical documentation, integrated logistic support activities, data management and technical training working in close partnership with the client.

It's this integrated approach that helps achieve the lowest possible cost of technical information throughout a system's lifetime.

## Verebus Capability Sustainment Platform Model (CSP)

Verebus provides engineering, technical and logistic documentation and integrated logistic services for Defence projects. All in an integrated way. As a result, Verebus offers complete outsourcing of all activities related to efficient Asset Information Management. All the necessary competencies are bundled in a Capability Sustainment Platform. If necessary, these activities can be carried out in partnership with other companies in the Defence industry.

## Verebus: your ideal partner

Verebus brings over 60 years' experience of engineering consultancy to your Defence projects.

- Reliable, professional, independent and cost-effective since 1947.
- Dedicated key account management with Defence experience.
- Employees screened by MIVD.
- Authorized to work on Defence systems.
- Direct access to Dutch Defence Network via MULAN connections.
- Certified work processes (NEN-EN-ISO 9001:2008 certification).
- Acts as a partner and a pied à terre to fulfill your offset obligations.
- Fixed-price or framework contracts.
- Specialists posted at project locations.

An impressive track record: Over the years, Verebus has developed unmatched experience in several key fields.

### Defence projects for the Navy, Army and Air Force

- Engineering projects.
- System documentation and training.
- Logistic and technical information.
- Technical files for control and maintenance.
- Content for maintenance management systems.
- IETD for S1000D / 2000M standards.

### Aerospace and aviation

- Aircraft maintenance documentation.
- Design requirements and instructions.
- IETD for S1000D / 2000M standards.

Verebus Engineering BV is a mid-sized engineering consultancy firm with clients in the market segments: defence, infrastructure (including rail infrastructure), marine & offshore, aviation and the energy and building sectors.

Our activities include consultancy, design, engineering, commissioning, managing (hosting) your technical documentation (systems), developing training courses, and training of your staff. We offer support during the complete life cycle of your technical systems and installations. We are independent. If requested or required we will work with partners on projects on a complementary basis.
